Probability	Severity					
or		Insignificant	Minor	Moderate	Major	Catastrophic
likelihood	Very likely					
	Likely					
	Possible		Being unable to remember details of how to do things.	Unable to prepare a presentation in time. Illness compromising my performance		Unfixable bugs in SQL or Java Being unable to get everything done in time
	Unlikely				Unable to get project uploaded on to Github	Being forced to pull out of the project due to unforeseen circumstances
	Very unlikely					Internet connect going down

Risk assessment contingency plans

In order of combined likelihood and severity, the two biggest risks going into this project as the following:

Unfixable bugs...and being unable to get everything done in time. These are effectively variants of the same issue and would seriously compromise my ability to get good marks. The only possible way of mitigating this is to try and explain what I think went wrong during my presentation and what I might have done differently.

Being forced to pull out of the project due to unforeseen circumstances is unlikely...the only thing that might trigger this would be QA management deciding to remove me from the course for reasons I would not want to speculate on. There wouldn't be much I could do about that.

Internet going down during the project is very unlikely but not impossible. If neccersary I can use the 4G connection on my ipad to maintain communication through Discord and Team while continuing to work offline on my PC.

Being unable to get my project uploaded to Github is unlikely and while severe, not catastrophic. If neccersary I can be guided through any issues, if Github is not functioning at all for whatever reason, I can zip up my project and email it to my trainer and ask him to distribute it to his colleagues(with his permission of course).

Being unable to prepare a presentation in time is still possible but less likely than it was for the first project given that I won't actually have to give a presentation. I will still require time to at least prepare one however and this time make sure that proper slides are included. This may potentially compromise my ability to complete the rest of the project but if neccersary I can work on one of the bank holidays to make up for lost time and leave the presentation as late as possible.

Illness compromising my performance is a concern...I had coronavirus during the pre-learning. That will drain my energy levels so I'll have to pace myself better...but that then runs the risk of not being able to complete the project on time.

Hopefully I will be able to ask for an extension using illness as mitigating circumstances if that happens.

Being unable to remember the details of how to do things is a relatively minor concern. I have Google, I have QA academy, I have my trainer. One way or another, I can get round that obstacle
